### Notes

1. **Safety Concerns**: KHK recommends using K stock gears, with theoretical values for bending strength of 0.10~0.26. Please read “Cautions on Performing Secondary Operations” (Page 341) when performing modifications and/or secondary operations for safety concerns. KHK Quick-Mod Gear, the KHK system for quick modification of KHK stock gears, is also available.
2. **Avoid Performing Secondary Operations**: Avoid performing secondary operations that narrow the tooth width, as it affects precision and strength.
